DETAILED ACTION

Claim Rejections - 35 USC § 902

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 rejected under 35 U.S.C. 102(b) as being anticipated by **Spreen US patent 1, 688, 891**.

Spreen'891 discloses an electric motor (Fig. 1) a rotor (12) a stator (14) located external to the rotor (Fig. 1) and including main and auxiliary windings (15, Fig. 1) an outer motor case (16 frame Fig. 1) and a plurality of isolators (17, rubber column, line 23, Fig. 1) positioned between the stator and outer motor case (Fig. 1) and configured inherently to enhance forces applied to a foundation due to excitation of the auxiliary windings, the isolators are of an electrometric material (rubber 17), the auxiliary windings generate forces, and wherein the outer motor case attaches to a foundation and reacts the forces generated by the auxiliary windings (in any electric motor the magnetic field of the stator and rotor inherently generate a rotating motion resulting torque which applies to the foundation to hold the housing of the motor), the isolators are symmetrically positioned about an axis of the motor (see the Fig. 12, isolating element 17 is symmetric to the axis of the motor), the isolators are positioned to be in shear for

radial and axial deflections and in compression for rotation about an axis of the motor (see page 1, line 1-10) , the isolating rubber being configured to deflect torque (such as anti vibration column 1,line 5).

Response to Arguments

1. Applicant's arguments filed 08/04/2003 have been fully considered but they are not persuasive.

Referring to **Spreen US patent 1,688,891** , **Spreen** clearly teaches a compliant mount (17,which is resiliently supporting the stator and frame see paragraph 3 line 82-85) ,the member 17 not only reducing the vibration but also transferring Forces via frame 11 to the base ,see Fig. 2).

Communication

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Iraj A Mohandesi whose telephone number is (703)305-3242 .The examiner can normally be reached on M-F.
